Here are some helpful tips to accurately measuring. You will need a tape measure and pencil. Stand inside your porch with your back to the house and sketch the layout of your porch. Number your openings with opening #1 to the left side of the house, continue numbering the openings clockwise. If needed include a door as a numbered opening. If you are sketching out a new porch layout – provide the total wall size.

Step 1: Measure in three locations vertically and three locations horizontally as shown above.

Step 2: Take the smallest of the three measurements you took vertically and the smallest of the three measurements you took horizontally. These two measurements will be your rough opening size.
